EDUCATION

FAR EASTERN UNIVERSITY INSTITUTE OF TECHNOLOGY

Bachelor of Science in Information Technology
Dean's List 2025-2026

Manila

Expected September 2026

WORK EXPERIENCE

DEVCON PHILIPPINES

AI Engineer & Fullstack Developer

Makati City, Metro Manila

Apr 2026 – July 2026

- **DEVCON+ App:** Took the DEVCON+ membership and events app from MVP to production, re-architecting its responsive React front end and services to reliably serve 1000+ concurrent users — up from a breaking point of ~40 — with a scaling roadmap toward 10,000, using React (Vite), Nest.js, Supabase, Docker, and AWS.
- **Local AI Harness:** Built a web-based harness that runs free, open-source LLMs (Qwen, Llama, Gemma) locally for privacy and unlimited usage without cloud rate limits or costs, containerizing the stack with Docker and conducting model R&D on Mac Studio hardware.
- **AI Agent Orchestration:** Developed and orchestrated AI agents that turn documents, plans, and PRDs into working applications, and built two Telegram-based project-management bots for task and Kanban workflows.
- **Community & Mentorship:** Served as technical support and lead learner for Sui blockchain code camps, guiding students through hands-on development.

HIGHLY SUCCEED INC.

Web Developer Intern (Primary Role)

Mandaluyong City, Metro Manila

Jan 2026 – Mar 2026

- **Data Room Project (Full Stack):** Developed core features for a secure data room — a document-sharing platform similar to Google Drive but without storage limits — implementing role-based access control, document management, and API integrations for internal users.
- **Alumni Management System (Frontend):** Translated design wireframes and mockups into 7 responsive, mobile-compatible React pages, extracting reusable components and coordinating with backend developers to integrate the supporting APIs.
- **Inventory Management System (Frontend Lead):** Led frontend development, coordinating with 2 frontend and 1 backend developer to define and document a reusable component structure, enforce UI and coding standards and design consistency, and validate the technical feasibility of designs during API integration.

Quality Assurance Intern (Concurrent)

Jan 2026 – Mar 2026

- **Payroll System (QA Lead):** Led QA by designing test plans and writing 150+ functional and regression test cases, coordinating with developers to ensure accurate payroll processing.
- Performed QA across 3 client systems (2 private-sector and 1 local government unit), executing manual tests on key user flows, validating bug fixes with developers, and confirming release readiness before deployment.

VALLEY HOTEL

UI/UX Designer

Tuguegarao City, Cagayan

Aug 2024 – Nov 2024

- Designed the user interface and digital experience for Valley Hotel across 10 pages in Figma, building reusable components and shared assets to keep layouts consistent with brand design standards.
- Collaborated with internal teams via Slack and managed projects through Trello.
- Created wireframes, prototypes, and high-fidelity mockups across desktop and mobile breakpoints, producing developer-ready specs and breakpoint behavior for handoff to implementation.

PROJECTS

TASK MANAGEMENT SYSTEM WITH AI INTEGRATION

- Built a full-stack task management system on the MERN stack (MongoDB, Express, React, Node.js) with AI-assisted task prioritization and workflow suggestions.
- Integrated the OpenAI API to analyze tasks and recommend priority order and next actions from user input.

AI-POWERED PERSONALIZED EMAIL AUTOMATION VIA TELEGRAM

- Built an automation workflow in n8n with a Telegram bot that generates and sends professional emails from minimal user input.
- Integrated the Google Gemini API with prompt engineering to produce formal, context-aware email drafts.

ETERNALPEASE: AN AI-POWERED INQUIRY AND THEME RECOMMENDER USING NATURAL LANGUAGE PROCESSING

- Designed and developed a full-stack funeral-planning platform (Laravel, Inertia.js, Supabase) featuring an AI-powered inquiry and recommendation assistant.
- Built a conversational assistant with OpenAI GPT-4 to interpret user needs and provide context-aware guidance throughout the planning process.
- Integrated OpenAI DALL·E to generate real-time funeral theme visualizations based on user preferences.

ITSO DISPENSING SYSTEM

- Built a full-stack borrowing and dispensing system for school IT equipment (cables, monitors, mice, iPads) using CodeIgniter, PHP, and MySQL, covering request, release, and return workflows.
- Designed the MySQL schema and server-rendered UI, tracking item availability and borrower history to prevent double-booking of shared equipment.

ADDITIONAL

Technical Skills: Frontend (HTML & CSS, JavaScript, TypeScript, React, responsive & mobile-first development, reusable component libraries, web performance optimization), Backend (PHP, Laravel, CodeIgniter, Node.js, Express.js, Inertia.js), Databases (MySQL, PostgreSQL, Supabase, Firebase, MongoDB), Automation & AI (n8n, OpenAI, Google Gemini, prompt engineering), QA & Testing (test planning, functional & regression testing, manual testing), Cloud & DevOps (AWS, Docker, Git/GitHub), Tools (Figma, Jira, Slack, Trello).

Soft Skills: Problem-solving, cross-functional collaboration, clear technical communication, adaptability.

Certifications & Training:

Docker Foundations Professional (Docker, 2026); IT Specialist – Artificial Intelligence (Certiport, 2025); IT Specialist – JavaScript (Certiport, 2025); PMI Project Management Ready™ (PMI, 2025); IT Specialist – Python (Certiport, 2024); Introduction to Programming Using HTML and CSS (Certiport, 2024)
